## Readme for kernel3.m

The file kernel3.m contains the results for the three-loop kernel functions $K^{(3 a)}(s), K^{(3 b)}(s), K^{(3 b, 1 \mathrm{lb})}(s)$ and $K^{(3 c)}\left(s, s^{\prime}\right)$ of Ref. [1]. $K^{(3 a)}, K^{(3 b)}$ and $K^{(3 b, \text { lbl })}$ are expanded in $M_{\mu}^{2} / s$ and $M_{e} / M_{\mu}$ whereas $K^{(3 c)}$ also depends on $s^{\prime}$ and thus a further assumption on the hierarchy between $s$ and $s^{\prime}$ is necessary. We provide results for $s \approx s^{\prime} \gg M_{\mu}^{2}$ and $s^{\prime} \gg s \gg M_{\mu}^{2}$ from which approximations of $K^{(3 c)}\left(s, s^{\prime}\right)$ valid for all $s$ and $s^{\prime}$ can be constructed. In the case of $K^{(3 c)}\left(s, s^{\prime}\right)$ only the leading non-vanishing term in $M_{e} / M_{\mu}$ is computed.

The following table contains the information about the expansion depth of the expressions in kernel3.m:

| kernel | symbol in kernel3.m | highest available expansion term |
| :---: | :---: | :--- |
| $K^{(3 a)}$ | K3a | $\left(M_{\mu}^{2} / s\right)^{4}$ |
| $K^{(3 b)}$ | K3b | $\left(M_{\mu}^{2} / s\right)^{4},\left(M_{e}^{2} / s\right)^{1}\left(M_{\mu}^{2} / s\right)^{3}$ |
| $K^{(3 b, \text { bl })}$ | K3bLBL | $\left(M_{\mu}^{2} / s\right)^{4},\left(M_{e}^{2} / s\right)^{1}\left(M_{\mu}^{2} / s\right)^{3}$ |
| $K^{(3 c)}$ | K3cH1 | $\left(M_{\mu}^{2} / s\right)^{5},\left(M_{\mu}^{2} / s\right)^{3}\left[\left(\sqrt{s^{\prime}}-\sqrt{s}\right) / \sqrt{s}\right]^{3}$ |
|  | K3cH2 | $\left(M_{\mu}^{2} / s^{\prime}\right)^{5},\left(M_{\mu}^{2} / s^{\prime}\right)^{1}\left(s / s^{\prime}\right)^{4}$ |

The symbols used in kernel3.m have the following meaning:

$$
\begin{array}{c|c|c|c|c|c}
\text { symbol } & \text { Mmu } & \text { Mel } & \text { Ms } & \text { Msp } & \text { deltaMspMs } \\
\hline \text { meaning } & M_{\mu} & M_{e} & \sqrt{s} & \sqrt{s^{\prime}} & \sqrt{s^{\prime}}-\sqrt{s}
\end{array}
$$
